Abstract	How to get administrator's authorization in embedded Windows OS ?		
Keyword	Password, embedded Windows OS		
Related Product	All embedded OS from ASG's products.		

■ Problem Description:

This document could help you get the password for administrator.

Some functions require administrator's authorization, but the password did not mention in manual or other document.

■ Brief Solution - Step by Step:

In our embedded Windows OS which bundled with PPC/IPPC/UNO/TPC/SPC series, there is a password for administrator as **"password"**.

Please firstly to try the "password" if you encounter any password request for administrator's authorization in our embedded OS.
